

Irrigation Association
Friction Loss Charts 2008

Tables are based upon the following Hazen-Williams Equation:

$$H_f = 0.2083 \times \left(\frac{100}{C} \right)^{1.852} \times \frac{Q^{1.852}}{D^{4.866}}$$

The result is multiplied by 0.433 to give pounds per square inch [psi] loss for 100 feet of pipe.

The velocity values were derived using the following equation:

$$V = \frac{0.408 \times Q_{\text{gpm}}}{d^2}$$

The average inside diameter of outside diameter [OD] controlled pipe was based upon subtracting two times the minimum wall thickness plus one-half of the wall thickness tolerance from the outside diameter.

Information for pipe diameters and wall thicknesses came from the following resources:

- ASABE Standards. 2007. ANSI/ASAE S376.2 — Design, Installation and Performance of Underground, Thermoplastic Irrigation Pipes
- *Handbook of PVC Pipe*. Uni-Bell PVC Pipe Association
- Appropriate ASTM standards for nonplastic pipes

Pressure ratings for plastic pipes are based on 23°C or 73.4°F.

Head loss decreases (increases) approximately 1 percent for every 3 degrees Fahrenheit above (below) the reference temperature (73.4°F).
